## Una Kearns

myPatientSpace

Una Kearns is a senior global technology leader with 25 years' experience in both Ireland and Silicon Valley. She spent her career in technology and won many awards for innovation and bringing new products to market. She always thought she would have her own business one day and she decided to enter the eHealth space to improve patients' and families' experiences and help towards better outcomes.

In 2017, Una founded myPatientSpace, a SaaS patient engagement product built for the global healthcare market. Its aim is to improve the healthcare experience of patients and families by enabling providers of all types to provide rich, smart engagement across a patient's journey. myPatientSpace replaces paper-based education and non-curated internet sources with rich, personalized, curated micro-learning delivered exactly when the patient needs it, for improved decision making. Their smart automated and personalized care plans also help keep patients, families, and extended care teams engaged and connected with care no matter where they are - at home or in hospital. The product integrates with connected devices to support monitoring of patients and collecting patient reported outcomes and symptom checking.

The company has grown rapidly since establishment and was awarded support under the Enterprise Ireland Competitive Startup Fund in December 2017. The following year, myPatientSpace made it to the final of the EIT European Digital and Medtech Health finals and won the Health Innovation Hub call for health innovation in Ireland.

The product is now live with a number of customers across therapy areas from Orthopaedics and Sleep Apnoea and is starting new projects around new drug therapies and oncology.
