

AQUILA
EDUCATION

Amy DeMarco

Aquila Education

Aquila Education is an education technology company that specializes in virtual reality (VR) and augmented reality (AR) software and hardware, set up by Amy DeMarco in 2016.

Amy DeMarco is a former history and special education teacher from New York. After receiving her second masters in Education Leadership, Amy became a lead instructional specialist for a New York City Department of Education borough center, where she was responsible for developing and delivering professional development and training to over 7,000 teachers. During this time, she worked with teachers and administrators on best practices and how to effectively use technology in the classroom.

When she moved to Ireland in 2016, Amy decided to use what she learned in New York to set up her own education technology company which would focus on the use of augmented and virtual reality for educational purposes. Aquila Education has a variety of services and products for schools that allow them to purchase out of the box classroom solutions. They develop their own augmented and virtual reality apps, lessons and curriculum for a variety of products to supplement their virtual and augmented reality kits. Their services and products allow educators to easily integrate technology into the classroom providing them with curriculum, resources and support. In addition, Aquila Education develops bespoke virtual and augmented reality apps for businesses to train their employees in a safe and effective manner.
