

Clare Ryan

ITUS Secure Technologies

Clare Ryan is the co-founder and CEO of ITUS Secure Technologies, a cybersecurity company that truly aims to simplify cybersecurity management for SMEs. Together with her co-founder Paul Daly, she has developed CYBRISC, a SaaS software that uses Machine Learning to determine the likelihood of a cyber incident within small and medium businesses. This unique score is used by underwriters within the insurance industry specifically for cyber insurance policies, helping to provide the SME with the right level of cover to protect their business and their customers.

Clare is passionate about simplifying complex processes and creating societal change. Prior to embarking on the start-up world, Clare created a series of flagship programmes within higher education addressing underrepresentation of young people from lower socio-economic classes, and securing philanthropic support for her endeavours. She continues on that path, helping educate SMEs about cyber risk, while ensuring they are rewarded for investing in cybersecurity through reduced premium costs for what is now seen as an essential business product (Cyber Insurance).

Holding a MA in Governance, Compliance and Data Protection in Financial Services in addition to her BSc (Hons) and PhD, Clare is a certified Data Protection Officer. ITUS are on a mission to ensure every SME can access the best Cyber Insurance to protect their business and aim to revolutionise the world of insurance in the same way driver telematics changed the motor insurance marketplace. Despite being early on that journey, ITUS has secured numerous national awards including Zurich Innovation Champion for Ireland and top three FinTech Start-Ups in the National Start-up Awards.
